NET's notepad); @luke1872's Debugger Tool (free); @TheAugurs' Sproxel Tracker (free) Conclusion [#sec:conc] ===== We present the Sproxel project and its infrastructure, which is open-source software to build, debug, and verify 3D models created in Blender. The infrastructure provides: - a library for converting between Blender's coordinate space and the Blender's native studio space (Section \[sec:blender-spaces]); - a tool for processing data sent from a Blender model viewer to the Blender's 'bpy.ops.outliner.write' operation and back (Section \[sec:blender-ops]); - a set of command-line scripts for importing, exporting, querying, and debugging models, primitives, and elements (Section \[sec:console]). The Sproxel project is an "active" research project, as its main aim is to support the needs of a teaching environment. This will involve a long-term integration with Blender, which can be seen as an incentive for Blender's developers to adopt the Sproxel project. Acknowledgements [#acknowledgements.unnumbered] ===== This work has been partially funded by the EPSRC-funded programme "The Core: EP/P015916/1" at King's College London. We are thankful to the Blender Developers for making it possible to integrate the Sproxel project with the Blender project. 1. Field of the Invention The present invention relates to a high-strength, low-alloyed steel sheet, and, in particular, to a high-strength, low-alloyed steel sheet that includes a tensile strength of 850 MPa or more and a total elongation of 30% or more. 2. Description of the Related Art High-strength, low-alloyed steels have been attracting attention in recent years as a material for structural members that have to be light in weight and small in size. As a high-strength, low-alloyed steel sheet for structural members, a high-strength, low-alloyed steel sheet having a tensile strength of 800 MPa or more and a total elongation of 60% 82157476af
